

THE CLOUD

Points	5,01,83,644
Average density	181.7 per m ²
Covered extent	497 x 555 m
Bounding area	27.61 ha
Elevation range	29.426 to 103.141 m
Easting range	361351.54 to 361848.81
Northing range	2420864.48 to 2421419.81

FORMAT

Specification	LAS 1.2
Point data format	3
Produced with	Global Mapper
Projection	UTM zone 43N / WGS84

CLASSIFICATION

Ground	50.6%	approx 2,53,91,696
Unclassified	49.4%	approx 2,47,91,948

Shares are measured from a sample of 2,00,735 points, every 250th record in the file, not estimated.

This cloud separates ground returns from unclassified returns. It does not carry separate vegetation, building or noise classes, so it supports bare earth extraction but not feature classification.

VIEWING THE FULL CLOUD

The point cloud itself is 50.2 million points and is not yet viewable in the browser: that needs a dedicated point cloud viewer, which is planned. The terrain model derived from the ground returns is already on the site's map, where it drives the relief shading, the elevation readout and the measurement tools.
